

THISAL DILMITH

SOFTWARE DEVELOPER - INTERN

PROFESSIONAL SUMMARY

Aspiring Software Engineer skilled in Python, Java, and MERN Stack. Creator of published Python libraries (ctkchart, tkchart) and practical applications including a YouTube Downloader desktop tool and full-stack web systems. Passionate about building efficient solutions and clear documentation.

PROJECT EXPERIENCE

PyTube Downloader

Feature-rich desktop YouTube downloader with multi-format, multi-quality, and concurrent download support | May 2024 – Present | [GitHub](#) | [Installer](#)

- Built a multi-threaded Python desktop application utilizing CustomTkinter and FFmpeg to process and download high-resolution video streams up to 8K.
- Implemented concurrent download capabilities with real-time UI progress tracking, dynamic folder organization, and automatic predefined settings integration.
- Scaled the project to support multi-language localizations, resulting in 170+ GitHub stars and active contributions from the open-source community.

ctkchart & tkchart

Published Python library providing live-updating line charts for CustomTkinter GUIs | Dec 2022 – Present | [GitHub](#) | [PyPI](#)

- Developed and maintained two Python data visualization libraries on PyPI to render high-performance, real-time line charts for standard and modern desktop GUIs
- Designed dynamic light and dark theme switching mechanisms and customizable axes to ensure seamless integration into developer-facing application interfaces
- Authored comprehensive English and Chinese documentation alongside highly readable code structures to lower the barrier to entry for contributing developers.

Vehicle Service Center Management System

Full-stack platform for service scheduling, vehicle management, inventory management, and more | Feb 2026 – May 2026

- Collaborated in a 6-member team to engineer a service center management platform, taking full ownership of the vehicle and time-slot scheduling subsystems using the MERN stack.
- Implemented a conflict-free booking engine in Node.js and Express that validates real-time appointment requests against active workshop bay capacities to eliminate double-bookings.
- Designed interactive React components and optimized MongoDB schemas to handle comprehensive vehicle data profiles, customer ownership records, and service history tracking.

SKILLS

Coding Languages

- Python
- Java
- HTML
- CSS
- Java Script
- C++
- R

Frameworks & Libraries

- MERN Stack
 - MongoDB
 - Express.js
 - React
 - Node.js
- Jakarta EE (Servlets + JSP)
- CustomTkinter, Tkinter

Database

- SQL (PostgreSQL, SQL Server)
- MongoDB

Tools & Technologies

- Git
- Maven
- Vite
- npm

Core Competencies

- Full-Stack Development
- GUI Development
- Problem Solving
- Technical Documentation
- Open Source Development

Auto Fuel X

Enterprise Java web application for fuel inventory and workshop operations | Aug 2025 – Nov 2025 | [GitHub](#)

- Collaborated in a 6-engineer team to architect a full-stack enterprise web application using Jakarta EE 10 (Servlets/JSP) and Microsoft SQL Server to streamline fuel station logistics.
- Implemented a secure Role-Based Access Control (RBAC) system and dynamic routing logic to decouple workflows for 4 distinct user roles including Admins and Cashiers.
- Developed automated database triggers and relational schemas to handle real-time fuel stock monitoring, and transactional dispensing records.

Smart Water Tank Monitoring System

End-to-end IoT platform for real-time water analytics | Aug 2024 – Nov 2024 | [GitHub](#)

- Engineered a full-stack IoT solution integrating ESP32 ultrasonic and TDS sensors with a Flask API to track water levels and quality in real time and control water pump.
- Developed a cross-platform React Native mobile app and a web dashboard to provide end-users with live telemetry data and system control.

AI Verse

Centralized discovery platform for artificial intelligence tools | Mar 2026 – Present | [GitHub](#) | [Live Website](#)

- Designed and built a responsive web platform using React and Vite to aggregate, search, and filter artificial intelligence resources.
- Implemented dynamic rendering of tool cards, search filtering, and an optimized interface to handle large JSON datasets efficiently.

EDUCATIONAL BACKGROUND

B.Sc. (Hons) in Information Technology

Specialization: Software Engineering

Sri Lanka Institute of Information Technology (SLIIT)

2024 – Present (Expected 2028)

Current Status: 3rd Year | Semester 1

CGPA: 3.78/4.00

G.C.E. Advanced Level (A/L)

Panadura Royal College - Commerce stream

2022
