PROFESSIONAL SUMMARY

Software Engineering undergraduate with a CGPA of 3.78 and hands-on experience in full-stack web development, desktop applications, and open-source Python libraries. Built projects with 72,000+ combined PyPI downloads and a desktop app with 174 GitHub stars and 6,000+ installs. Strong in Python, Java, JavaScript, and the MERN stack, with experience delivering production-ready software in team environments.

EDUCATION

B.Sc. (Hons) in Information Technology, Specialization in Software Engineering

Sri Lanka Institute of Information Technology (SLIIT) | 2024 – Present | Expected 2028

Current Status: 3rd Year, Semester 1 | CGPA: 3.78/4.00

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, HTML, CSS

Frameworks/Libraries: MERN Stack, React, Node.js, Express.js, MongoDB, Jakarta EE, Servlet/JSP, CustomTkinter, Tkinter, React Native

Databases: PostgreSQL, SQL Server, MongoDB

Tools: Git, Maven, Vite, npm

PROJECT EXPERIENCE

PyTube Downloader | May 2024 – Present | [GitHub](#) | [Installer](#)

Desktop YouTube downloader with multi-quality, and concurrent download support

- Built a multi-threaded Python desktop app with CustomTkinter and FFmpeg supporting downloads up to 8K.
- Added concurrent downloads, progress tracking, folder organization, and preset settings.
- Reached 174 GitHub stars and 6,000+ downloads with multi-language support.

tkchart & ctkchart | Dec 2022 – Present | [GitHub](#) | [PyPI](#)

Python libraries for live-updating line charts in Tkinter apps.

- Achieved 47 stars and reached 72,000+ downloads on PyPI.
- Added customizable features, colors, fonts, width, and real-time chart rendering.
- Wrote English and Chinese documentation to support adoption and contributions.

Vehicle Service Center Management System | Feb 2026 – May 2026 | [GitHub](#)

Full-stack system for vehicle service scheduling and management.

- Worked in a 6-member team and led vehicle management and scheduling features.
- Built a conflict-free booking engine in Node.js and Express that validates booking requests against available capacity.
- Designed React UI and optimized MongoDB schemas for vehicle and service records.

Auto Fuel X | Aug 2025 – Nov 2025 | [GitHub](#)

Java web application for fuel inventory and workshop operations.

- Built the system with Jakarta EE 10 and SQL Server in a 6-engineer team.
- Implemented RBAC and routing for four user roles.
- Created database triggers and schemas for fuel stock and dispensing records.
